12. Settings and the age limit (administrators)
13. Deployment and maintenance
14. Data protection

Part 1

Member Guide

This part is for every GAT 2027 member: how to register, log in, use your dashboard, grow your network with your referral link, follow campaign events, and report from your polling unit.

1. What you need

- A phone or computer with internet access (the site works on any modern browser).
- Your Nigerian mobile number — it becomes your login and can only be registered once.
- The name of the polling unit where you are registered to vote (it is printed on your PVC).
- Optional: a passport photograph, your Voter Identification Number (VIN), and the referral code or link of the person who invited you.
- If you can, register while standing at your polling unit so your phone can capture its exact GPS position.

2. Registering as a member

Open the website and press **Register as a member**, or open the referral link someone sent you (it looks like /register?ref=GAT-XXXXXX). Registration has three short steps.

Step 1 — Location and polling unit

- 1 Choose your Geopolitical zone, then your State, then your Local Government Area (LGA).
- 2 Choose your Ward. If it is not in the list, pick "My ward is not listed" and type its name.
- 3 Choose your Polling unit. If it is not listed, pick "My polling unit is not listed" and type its name (and the PU code if you know it).
- 4 Set the GPS location: press "Use my current location" while at the polling unit, or click the map to drop the pin, or type the latitude and longitude. If the unit already has a known location it is loaded for you — drag the pin if it is not exact.
- 5 Press Continue to biodata.

Member registration

Three short steps: your polling unit location, your biodata, then your account.

1 Location & polling unit

2 Biodata profile

3 Account & referral

Where do you vote?

Geopolitical zone *

State *

Local Government Area *

North Central

Benue

Makurdi

Ward *

ACHAKPA

Polling unit *

ACHAKPA

Choose the polling unit where you are registered to vote. If it is not listed, pick the last option and type it.

Polling unit GPS location

Tap **Use my current location** while standing at the polling unit, or click the map to drop the pin, or type the coordinates.

Use my current location

Known location loaded for this polling unit. Adjust the pin if it is not exact.

+

-

Step 1 — zone, state, LGA, ward and polling unit cascade automatically as you choose each one.

Step 2 — Biodata profile

- 1 Enter your first name, surname and (optionally) other name.
- 2 Select your gender and enter your date of birth. Registration is only open to members who meet the age limit set by the coordinators (16 years by default); younger applicants cannot complete the form.
- 3 Enter your phone number (e.g. 0803 123 4567). This is your login. Email, occupation, education, VIN and address are optional but help coordinators plan.
- 4 Optionally add a passport photograph — it is resized automatically.
- 5 Press Continue.

Passport photograph
 No file chosen

Step 2 — biodata profile.

Step 3 — Account and referral

- 1 Choose a password of at least 6 characters and confirm it.
- 2 If someone invited you, their referral code is filled in already; otherwise type it or leave it blank. The form confirms the name of the person who referred you.
- 3 Review your details, tick the consent box and press Complete registration.

Confirm password *

At least 6 characters.

Referral code (who invited you?)

Leave blank if nobody referred you.

Review

Name	Amaka Eze
Phone	08031112233
Gender	Female
Zone	North Central
State	Benue
LGA	Makurdi
Ward	AGAN
Polling unit	ACHAKPA
PU location	7.749946, 8.547354

Step 3 — review your details before completing registration.

You will see your member number (e.g. GAT-000123) and your own referral link. Copy it or share it straight to WhatsApp.

Problems? "This phone number is already registered" means you already have an account — log in instead. "Referral code not found" means the code was typed wrongly; leave it blank if you are not sure.

3. Logging in and out

- Press Log in and enter your phone number and password. Any format works: 0803..., +234 803... or 234 803...
- Forgot your password? Contact your ward, state or zonal coordinator — an administrator can reset it for you from the coordination centre.
- To log out, use Log out in the top menu or the power icon at the bottom of the dashboard sidebar.

The member login page.

4. Your dashboard

After logging in you land on Overview. The sidebar on the left (or the menu on a phone) gives you:

Page	What it shows
Overview	Your profile strip, four key numbers (people you referred, total network, reports filed, members at your polling unit), your referral link and your most recent referrals.
My Referrals	Everyone you personally referred, how many people each of them has referred, and your network by level.
My Polling Unit	A map with the pinned location of your polling unit, its details, and how many members are registered at your unit, ward, LGA and state.

Page	What it shows
My Reports	Every field report you have filed, its status (open, reviewed, closed) and any coordinator note.
Profile & Settings	Edit your biodata, photo, polling unit and GPS pin, and change your password.
File a Field Report	Opens the report form.
User Manual (PDF)	This document.

The screenshot shows the 'MEMBER PORTAL Overview' page. On the left is a dark sidebar with the APC logo and 'Grassroot Advocacy for Tinubu MEMBER PORTAL - 2027'. The sidebar menu includes: DASHBOARD (Overview, My Referrals, My Polling Unit, My Reports), ACCOUNT (Profile & Settings, File a Field Report), and HELP (User Manual (PDF), Public Website). The main content area shows the member's profile: 'Demo Member' (GAT-000005, member, Benue), joined since 11 Sep 2026, with an 'Edit profile' button. Below the profile are four summary cards: 'People you referred' (Direct registrations through your link), 'Total network' (All levels below you), 'Reports filed' (Nothing filed yet), and 'Members at your polling unit' (Ward: 0 - LGA: 0 - State: 2). The 'Your referral link' section shows a link 'http://localhost:8083/register?ref=MEMBER-5KFJ3Q' with a 'Copy' button, a referral code 'MEMBER-5KFJ3Q', and buttons to 'Share on WhatsApp' and 'Share by SMS'. A tip suggests asking people to share their own links. The 'Recent referrals' section shows 'No referrals yet' with a 'View all' button. The footer includes the GAT logo and 'Grassroot Advocacy for Tinubu GAT 2027 · Forward Together with PBAT'.

The member dashboard Overview page.

5. Your referral link and network

- Your referral code (GAT-XXXXXX) and link are on the Overview page. Press Copy, or share directly to WhatsApp or by SMS.
- Anyone who registers through your link is counted as your direct referral. When they refer others, those people join your total network (level 2, level 3, and so on).
- Ask every person you bring in to share their own link — your total network grows with theirs.
- Coordinators and Grand Patrons see a leaderboard of top referrers within their state or zone; administrators see it nationally.

6. Filing a field report

- 1 Press File a Field Report (top right of the dashboard or in the sidebar).
- 2 Choose a category: Activity / meeting / rally, Voter mobilisation update, Incident, Complaint, or Other.
- 3 Give the report a short title and describe what happened: when, where, how many people, and what support is needed.
- 4 Optionally tick "Attach my current GPS location" so coordinators can see exactly where you are reporting from.

- 5 Press Submit report. Your report appears under My Reports with the status Open until a coordinator reviews it. Their note, if any, is shown under the report.

7. Events and the campaign brochure

The public **Events** page (linked from the menu on every page) lists rallies, town halls and mobilisation drives from across the country, split into Upcoming and Past. Each event shows its date, location and a description; once photos and video are ready they appear as "Watch video" and "View photos" links — until then the card simply says "Photos & videos coming soon."

The home page (and the menu, on both the main site and this manual's link list) also has a **Download brochure** button with the full GAT 2027 print brochure as a PDF, for sharing or printing at physical mobilisation events.

The home page, with Register, Member login and Download brochure.

The public Events page.

8. Updating your profile

- Profile & Settings → Biodata: correct your names, contact details, occupation or photo, then Save changes.
- Profile & Settings → Polling unit & GPS: only change this if you were registered at the wrong unit. Re-pin the location with “Use my current location” or by dragging the pin.
- Change password: enter your current password and the new one (minimum 6 characters).

9. Frequently asked questions

- The map does not load — you need internet access for the map tiles; you can still type the coordinates.
- "Could not get your location" — allow location access in your browser, or move outdoors for a better GPS signal, or click the map instead.
- My polling unit has no GPS location — the first member who pins a location fixes it for everyone registered there afterwards.
- I registered under the wrong referrer — contact your coordinator.
- Your data is used only for GAT 2027 membership and mobilisation, as you consented to at registration.

Part 2

Coordinator, Grand Patron & Administrator Guide

This part is for state coordinators, zonal Grand Patrons and national administrators who use the Coordination Centre at /admin.

1. Roles

Role	Scope	Can do
Member	Own account	Register, edit own profile, share referral link, file reports, view own dashboard.
Coordinator	One state	Everything a member can do, plus the Coordination Centre limited to their own state: analytics, member list, member profiles, report triage, CSV export.
Grand Patron	One geopolitical zone	The same Coordination Centre access as a Coordinator, but scoped to an entire zone (every state within it) rather than a single state — for the party's zonal patrons overseeing several states at once.
Admin	Everywhere	Everything, for every zone and state, plus: change roles and suspend members, reset passwords, import location data, manage published events, and change settings such as the age limit.

Roles are assigned from Members → View → role selector, and only administrators can change a role. Make the person a member first (they register normally, choosing their own zone/state/LGA/ward/polling unit), then upgrade their role. A Coordinator's state and a Grand Patron's zone come from wherever that member registered — there is no separate “assign a zone” control, so confirm they registered in the right place (or update their polling unit under Profile & Settings) before promoting them.

2. First steps for the administrator

- 1 Log in with the administrator phone number and password given to you at deployment, then open My Member Dashboard → Profile & Settings → Change password and set a strong password immediately.
- 2 Open Location Data and confirm the counts: 37 states, 774 LGAs, 8,809 wards and roughly 174,000 polling units. If polling units are missing, import the CSV (section 11).
- 3 Open Settings & Age Limit and confirm the minimum registration age (default 16).
- 4 Promote your first state coordinators and zonal Grand Patrons once they have registered as members (section 1).
- 5 Add your first events under Admin → Events so the public Events page and home page are not empty (section 10).

For a quick first look at every role without registering real accounts, the system ships with a demo account for each role (Admin, Grand Patron, Coordinator and Member) — see your deployment notes for the current phone numbers and passwords, and change or remove them before using the system for real mobilisation.

3. The filter bar

Every Coordination Centre page starts with the same filter bar: Zone, State, LGA, Ward, Polling unit, Gender and a free-text Search (name, phone, member code or referral code). Press Apply to update the page; Clear resets it.

- Coordinators have the zone and state locked to their own state — both selectors are disabled and every page is scoped to that state only.
- Grand Patrons have only the zone locked to their own zone; the state selector stays free, so they can drill into any one state within their zone or leave it on “All states” to see the whole zone.
- Administrators can change every filter freely, across all zones and states.
- Export members CSV downloads the members that match the current filters, with all biodata, location, GPS and referral columns — open it in Excel.
- Print produces a clean printout of the current page without the sidebar and controls.

A Grand Patron's Overview — zone locked to North Central, state left free.

4. Overview

- Key numbers: registered members (and how many came through referral), registered today / last 7 days, polling units covered (with wards and LGAs), open field reports, and upcoming events.
- Registrations — last 30 days: a daily bar chart; hover a bar for the date and count.
- By geopolitical zone, Top referrers, Gender & age profile, Coverage (states, LGAs, wards, polling units, units with GPS), Top LGAs / wards / polling units, and Members by state for all 36 states and the FCT.

The administrator's Overview — unscoped, covering every state.

5. Breakdown by area

A ranked table of members per area with male/female split and share of the selection. Choose the level — Zone, State, LGA, Ward or Polling unit — and combine it with the filter bar to drill down, for example State = Kogi, level = Ward.

6. Coverage map

Each circle is a polling unit with at least one registered member; bigger circles mean more members. Click a circle for the unit name, ward, LGA, state and member count. Use the filters to focus on a state or LGA. Polling units without any GPS location cannot be shown; encourage members to pin them.

7. Referral leaderboard

Members ranked by direct referrals within the current selection. Click a name to open the member profile, which lists everyone they referred.

8. Members

- 1 Use the filter bar and Search to find members; the list shows code, name, phone, gender, location, GPS link, who referred them, how many they referred and the join date. Coordinator, Grand Patron and Admin accounts are shown with a role pill.
- 2 Press View to open the full profile: biodata, location, GPS (opens Google Maps), referral code and network, and the member's direct referrals.
- 3 Administrators can: change the role (member / coordinator / grand patron / admin) and Save role; Suspend a member (they are logged out and cannot log in until reactivated); Reset password by typing a new one and pressing Reset password — then tell the member their new password.

- You cannot change your own role or suspend yourself. Coordinators and Grand Patrons can view and triage within their scope but cannot change roles, statuses or passwords — those actions stay Admin-only.

The Members list, filtered to show role pills for Coordinator and Grand Patron accounts.

A member profile — an administrator can change the role, including to Grand Patron (zone).

9. Field reports

- Reports arrive with the status Open. Use the Open / Reviewed / Closed / All buttons to switch views.

- 2 Each report shows the category, member, phone, location and an optional GPS link to where it was filed.
- 3 Type a coordinator note (the member sees it on their dashboard), set the status, and press Save.
- 4 Incidents and complaints are highlighted in red — review them first.

10. Managing events

Admin → Events lists every event — published or draft, upcoming or past — with its date, location and media status. This section is Admin-only; coordinators and Grand Patrons do not see it.

- 1 Press + New event and fill in the title, date, location and description.
- 2 Cover image URL, Video URL and Photo gallery URL are all optional. Leave them blank until the media is ready — the public event card automatically shows “Photos & videos coming soon” instead.
- 3 Untick "Published" to keep an event as a draft, visible only here in the coordination centre, until you are ready to make it public.
- 4 Edit or Delete any event from the list. Deleting is immediate and cannot be undone.
- 5 Published events with a date today or later show under "Upcoming" on the public home page and Events page; once their date has passed they move automatically to "Past events."

About events

- Published events with a date today or later show as "upcoming" on the public home page.
- Leave the video and photo links blank until they're ready — the public page shows a "coming soon" note automatically.
- Draft (unpublished) events are only visible here in the coordination centre.

The Events list in the coordination centre.

11. Location data and CSV import (administrators)

States and LGAs are built in. Wards and polling units are imported from CSV. To add or update data: Location Data → Import from CSV → choose the file → Upload & import.

- Columns, in any order: state, lga, ward, polling_unit (or name), pu_code (optional), latitude, longitude. Alternative header names such as ward_name, local_government_name, state_name, location.latitude are recognised.
- Rows are matched by name: existing units are updated (code and coordinates filled in), new units are created. Nothing is duplicated when you import the same file twice.
- Coordinates outside Nigeria are treated as errors and dropped; the summary tells you how many.
- From Excel, use File → Save As → CSV UTF-8.

12. Settings and the age limit (administrators)

- Settings & Age Limit → Minimum age: members must be at least this old on the day they register (default 16). Younger applicants see the message “You must be at least N years old to register.”
- Maximum age is optional — leave it blank for no upper limit.
- Date of birth required: when ticked, members must supply their date of birth; when unticked, the limits apply only to members who do.
- Changes take effect immediately for new registrations and profile updates. Existing members are not removed.

Settings & Age Limit.

13. Deployment and maintenance

- The application is a Spring Boot 4 + Thymeleaf (Java 21) server, deployed to Railway from git with a Dockerfile and Railway's PostgreSQL database. Every push to the main branch redeploys automatically; Flyway database migrations and seed data (zones, states, LGAs, the default admin, and demo accounts) run at start-up.
- Environment variables: DATABASE_URL (from the Railway Postgres plugin), THYMELEAF_CACHE=true in production, GAT_ADMIN_PHONE / GAT_ADMIN_PASSWORD (used only when the first admin is created), and GAT_REMEMBER_KEY (keeps "remember me" logins valid across restarts).
- Backups: use Railway's Postgres backup feature, or export members regularly with Export members CSV.
- Local development: run ./mvnw spring-boot:run (mvnw.cmd on Windows) — requires JDK 21. Without DATABASE_URL set, a zero-configuration embedded H2 database is used instead of PostgreSQL.
- This manual is a static file at src/main/resources/static/docs/GAT-2027-User-Manual.pdf. It is not auto-generated — update and replace it there directly when the product changes.

14. Data protection

- Members consent at registration to GAT 2027 keeping their data for membership and mobilisation purposes only.
- Passwords are stored hashed; nobody, including administrators, can read them — only reset them.
- Give coordinator, Grand Patron or admin roles only to people who need them, and remove them when they leave.
- Changing roles, suspending members and resetting passwords are Admin-only actions, precisely so that access to sensitive member data and account control stays with a small, accountable group.
- Do not share CSV exports outside the organisation.
